PHILIPS

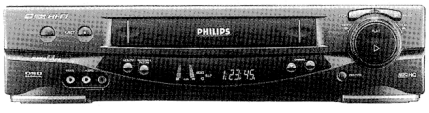
6 Head Turbo Drive Hi-Fi Stereo



HIGHLIGHTS

Turbo Drive Mechanism

A new mechanism that provides ultra smooth and fast winding & rewinding speed. This will greatly reduce your waiting time & will give you quick access to the new position on the tape. Time taken to switch from one function to another is also quicker than before. Another benefit of the Philips Turbo Drive concept is its compact size, with a width of only 360mm.

Plug & Play Set-up (not valid for /78)

Easier and faster tuner setup of the VCR after connecting the set to the mains and via RF cable or AV cable to the television set. By switching on the set, automatically the installation menu will start and step-by-step, the user will be instructed to give input for the VCR installation.

Jog/Shuttle Illuminated Multibrand TV Remote Control

This unique Remote Control will control most brands of colour television for the power On/Off, channel Up/Down as well as Volume Up/Down. The jog and shuttle control completes this remote for easy and accurate scenery pinpointing and editing. By pushing a button, the main function on the remote control are illuminated by a red led – very convenient in a dark environment as Remote Control functions are clearly visible.

Battery Back-up

This feature allow your "Clock Setting" and "Timer Programming" function to remain stored even without AC connnection. A Lithium Battery (CR2025) is used to back-up your timer and tuner for around 6 months (4,000 hours).

Incredible Picture Chip

Through advanced circuit design and mechanical integration of both the VCR TURBO DRIVE mechanism and theAudio/ Video signal processing, the Picture Performance of this VCR is truly INCREDIBLE. By utilizing the Incredible Picture Chip, an all-in-one control system as well as an automatic adjustment process, the very Best Picture Performance has been guaranteed. Automatic adjustments are also made when worn or noisy Rental tapes are played back, ensuring the very Best Picture Performance for every occasion.

Date Recording (/78 Only)

The set can be programmed in such a way that the date of recording is visible. If programmes have been recorded on different tapes and you want to playback in correct sequence, you easily can detect the first and last recording as a date will be shown.

Video Index Search System (VISS)

At the start of each recording, an index code is written automatically enabling the VCR to identify the start of the programmes. Easy scanning of the tape to the starting point of each programme. Full playback control and easy editing of own video tapes.

6 Head - 4 Head & 2 Audio

The DA 4 Head design ensures a perfect still, interference free slow motion & frame-by-frame advance picture while another 2 heads are added to provide high quality Stereo Hifi sound both in Playback & Recording. By connecting the audio output to a Hifi Audio System, you will be able to enjoy superb sound along with your favourite video tape programme.

New Rotary Auto Head Cleaner

The newly improved Auto Head Cleaning System cleans the VCR heads each time a tape is loaded or ejected, automatically removing dust & dirt. This system ensures maximum picture quality over an extended period of use. The change of "drum to cleaner" angle from 0° to 80° creates tremendous improvement on the quality of cleaning.

On Screen Display

Operation is made even easier by this function, which clearly shows you the status and settings of the VCR on your TV screen. On screen display is also used for step-by-step programming recordings, so you can see what you're doing at every stage and confirm it error free.

European PAL Playback (/77 and /78 only)

Now you can also enjoy all European PAL recorded tapes on this Multisystem VCR.

A/V Front In Gold Plated Socket

This feature provide a high quality and convenient connection from other VCR or camcorder to your VCR for the purpose of dubbing onto your VCR.

Pro-cision SLP 19 Micron Heads

By applying this technique, the output level in SP and SLP will be improved. Picture noise in dark area and unstable feeling on screen will be cleared up. The picture quality in SLP mode will be completely different than before.

Reverse Slow Motion

It is used to pinpoint the exact location on the tape searching in viewable mode. It is also good for editing and watching movement in the reverse mode.

Instant Play

Instant Play increases convenience of operation by dramatically reducing the access time between different tape transport function, for ex: switching from "Stop" to "Start" or from "Play" to "FF".

Goto / Next Function

This function takes you directly to any portion of the tape and automatically followed by the desired function. e.g: Rew & Rec. or FF & Play. This will free you from waiting in front of your VCR.

Real Time Tape Counter

The Real Time Tape Counter gives you an approximation of your remaining tape length and an easier definition on locating certain point on the tape. This is a convenient and natural way as it is done in hours, minutes and seconds.
